

Functional & Performance Testing Template

Model Performance Test

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (Caller and Short description)	Leave Caller and Short description empty and submit; then enter valid values and submit	Mandatory fields are flagged; valid inputs are accepted	Mandatory fields flagged; valid ticket saved	Pass
FT-02	Auto-number Validation (ticket Number)	Create two tickets and compare the Number field	Unique INC number for each ticket	INC00511 and INC00512 generated without duplication	Pass
FT-03	Content Generation (auto classification of Category and Subcategory)	Enter Short description with Network or Projector and click Submit, then reload the form	Network / Wi-Fi and Hardware / Projector are filled correctly	Network / Wi-Fi and Hardware / Projector filled correctly	Pass
FT-04	Flow and Email Connection Check	Check the flow is Active and open System Logs > Emails for the subject	Flow runs on ticket creation and the email is created	Flow ran; email "Your Request for the issue has been submitted." found for the caller	Pass
PT-01	Response Time Test	Submit a ticket and check how soon Category and Subcategory are filled	Should be under 3 seconds	Filled on the first reload after Save (exact time not measured)	Pass
PT-02	Flow Speed Test	Create multiple tickets one after another	Flow should not slow down	Both tickets classified without delay	Pass
PT-03	Email Notification Load Test	Create multiple tickets and check the Emails log	An email is created for every ticket without errors	Separate emails created for each caller within seconds	Pass
