

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

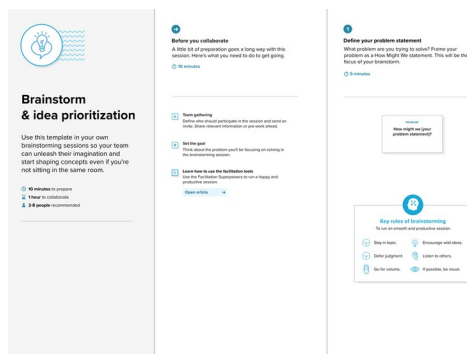

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement

The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually reviews each request and assigns a category, which is time-consuming and inefficient. This project automates ticket classification using ServiceNow Flow Designer by analyzing keywords in the incident's short description and description fields.

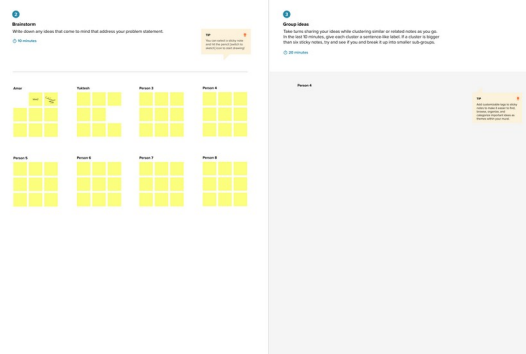

Objective

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Implement a no-code, easily maintainable solution.

Requirement Analysis & Planning

Students and teachers raise requests about network connectivity, hardware failures, account access problems, and system performance issues. IT staff currently review each ticket manually to identify the issue type, select the correct category and subcategory, and inform the caller about ticket creation. This process is time-consuming, error-prone, and not scalable as the number of requests increases.

Step-2: Brainstorm, Idea Listing and Grouping

Ideas were listed and then grouped by theme:

Group	Ideas
Automatic classification	Read the Short Description at ticket creation; match keywords (WiFi, Projector, Password/Login, Slow/Hanging); assign Category and Subcategory.
Data structure	Custom table (Incident WorkFlow) with auto-numbered ID; dependent Category → Subcategory choices (Network → Wi-Fi, Hardware → Projector, Access → Forgot Password, Performance → Slow Computer).
Notification	Send an automated email to the caller as soon as the ticket is created.
Maintainability & deployment	Build everything in Flow Designer (no code); package the work in an Update Set for export and reuse.
Future enhancements	Assignment automation, SLA tracking, predictive intelligence.

Step-3: Idea Prioritization

Each idea was rated on impact and effort; the selected ones form the final solution:

Idea	Impact	Effort	Decision
Keyword-based classification in Flow Designer	High	Low	Selected
Dependent Category / Subcategory choices	High	Low	Selected
Email notification to the caller	High	Low	Selected
Custom table with auto-numbering	Medium	Low	Selected
Update Set export for deployment	Medium	Low	Selected
Assignment automation	High	Medium	Future scope
SLA tracking	Medium	Medium	Future scope
Predictive intelligence (machine learning)	Medium	High	Future scope

Outcome: the high-impact, low-effort ideas were chosen, giving a complete, no-code solution that is easy to maintain and can be extended later.
