

Project Development Phase

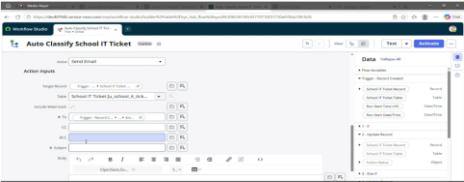

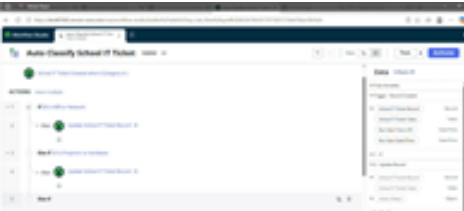

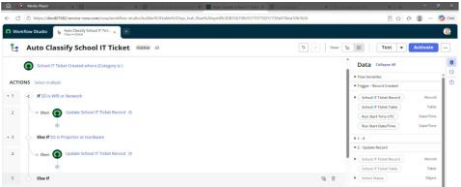

Model Performance Test

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	- Ticket records stored in the custom table Incident WorkFlow (u_incident_workflow) 9 fields on the form: Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, Assigned to - Test tickets INC00511 (Network) and INC00512 (Projector) shown with Category and Subcategory auto-filled
2.	Data Preprocessing	- Auto-number enabled (Prefix INC, 5 digits) for unique ticket numbers - Choice lists defined for Category, Subcategory and State - Subcategory made dependent on Category - Keyword-based classification of Short Description by Flow Designer
3.	Utilization of Data Filters	- Trigger condition: Category is empty - If / Else If conditions: Short Description contains Wi-Fi or Network, Projector, Forgot password, Slow computer - Emails log filtered by Subject contains “your” to verify notifications
4.	DAX Queries Used	- Not applicable – no DAX used in this ServiceNow project - Category and Subcategory are set by Update Record actions in the flow
5.	Dashboard design	No of Visualizations / Graphs - 0 Flow design: 1 trigger, 4 classification conditions (If / Else If), 4 Update Record actions and 1 Send Email action
6	Report Design	No of Visualizations / Graphs - 0 2 test scenarios executed (Network issue, Projector not turning on); both classified correctly and email sent to caller
