

Project Design Phase Problem – Solution Fit Template

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Problem – Solution Fit Template: Auto Ticket Classification using Flow Designer

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Students and teachers who raise IT support requests (Wi-Fi, projector, password, slow computer) - IT helpdesk staff who receive and sort the tickets - School administration that wants fast, low-cost IT support	6. CUSTOMER CONSTRAINTS CC - Small IT team and no budget for custom coding - Callers do not always know the technical term or the right category - Need a no-code solution that is easy to maintain - Little time during class to fill in long forms	5. AVAILABLE SOLUTIONS AS - Manual review: IT staff pick Category and Subcategory. Accurate for odd cases, but slow, error-prone, and does not scale - Callers choose their own category, which is often wrong - Phone or walk-in requests that are logged later	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Callers: get the issue fixed fast and know the request was received - IT staff: put each ticket in the right category and subcategory - IT staff: route tickets to the right group without extra work	9. PROBLEM ROOT CAUSE RC - Every ticket is classified by hand - Callers describe the issue in free text, with no category - Daily request volume keeps growing - No automatic acknowledgement after a ticket is created	7. BEHAVIOUR BE - Callers type a short description and expect a quick reply - Callers skip fields they do not understand - IT staff read every ticket and set the category by hand - Callers follow up to ask if the request arrived	
Identify strong TR & EM	3. TRIGGERS TR - Wi-Fi drops in the library - Projector will not turn on before class - Forgotten password or locked login - Computer is slow or hangs	10. YOUR SOLUTION SL - Flow Designer automation on the Incident WorkFlow table, triggered when a ticket is created with Category empty - Checks Short description for keywords: - Wi-Fi / Network: Network, Wi-Fi - Projector: Hardware, Projector - Password / Login: Access, Forgot Password - Slow / Hanging: Performance, Slow Computer - Sends a confirmation email to the caller - No code, easy to maintain and extend	8.1 ONLINE CH - Callers submit the ticket form in ServiceNow - Callers receive the confirmation email in their inbox	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM - Before: frustrated, anxious, unsure the request was received - After: reassured by the confirmation email and confident the right team has it		8.2 OFFLINE CH Callers phone or visit the IT desk to report or follow up; staff log the ticket in the same form
