

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket submission	Create a ticket with Caller and Short description; auto-generated INC number
FR-2	Automatic classification	Flow Designer matches keywords in Short description: Wi-Fi/Network, Projector, Password/Login, Slow/Hanging
FR-3	Category and Subcategory	Assign both fields without manual work; Subcategory options depend on Category
FR-4	Email notification	Email sent to the caller on ticket creation: "Your Request for the issue has been submitted"
FR-5	Ticket handling	Set Assigned group, Assigned to, and State (New to Closed)
FR-6	Deployment	Export the project update set as XML to share or deploy

Non-functional Requirements:

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Caller enters only Caller and Short description; no category to pick
NFR-2	Security	Role-based access controls (ACLs) so only authorized users view or change tickets
NFR-3	Reliability	Flow runs on every new ticket with empty Category, for consistent results
NFR-4	Performance	Classification and email happen automatically at creation, with no triage delay
NFR-5	Availability	Runs on the ServiceNow platform, available whenever the instance is up
NFR-6	Scalability	Add keywords or categories in Flow Designer with no code; extend to SLA tracking
