

Project Design Phase-II

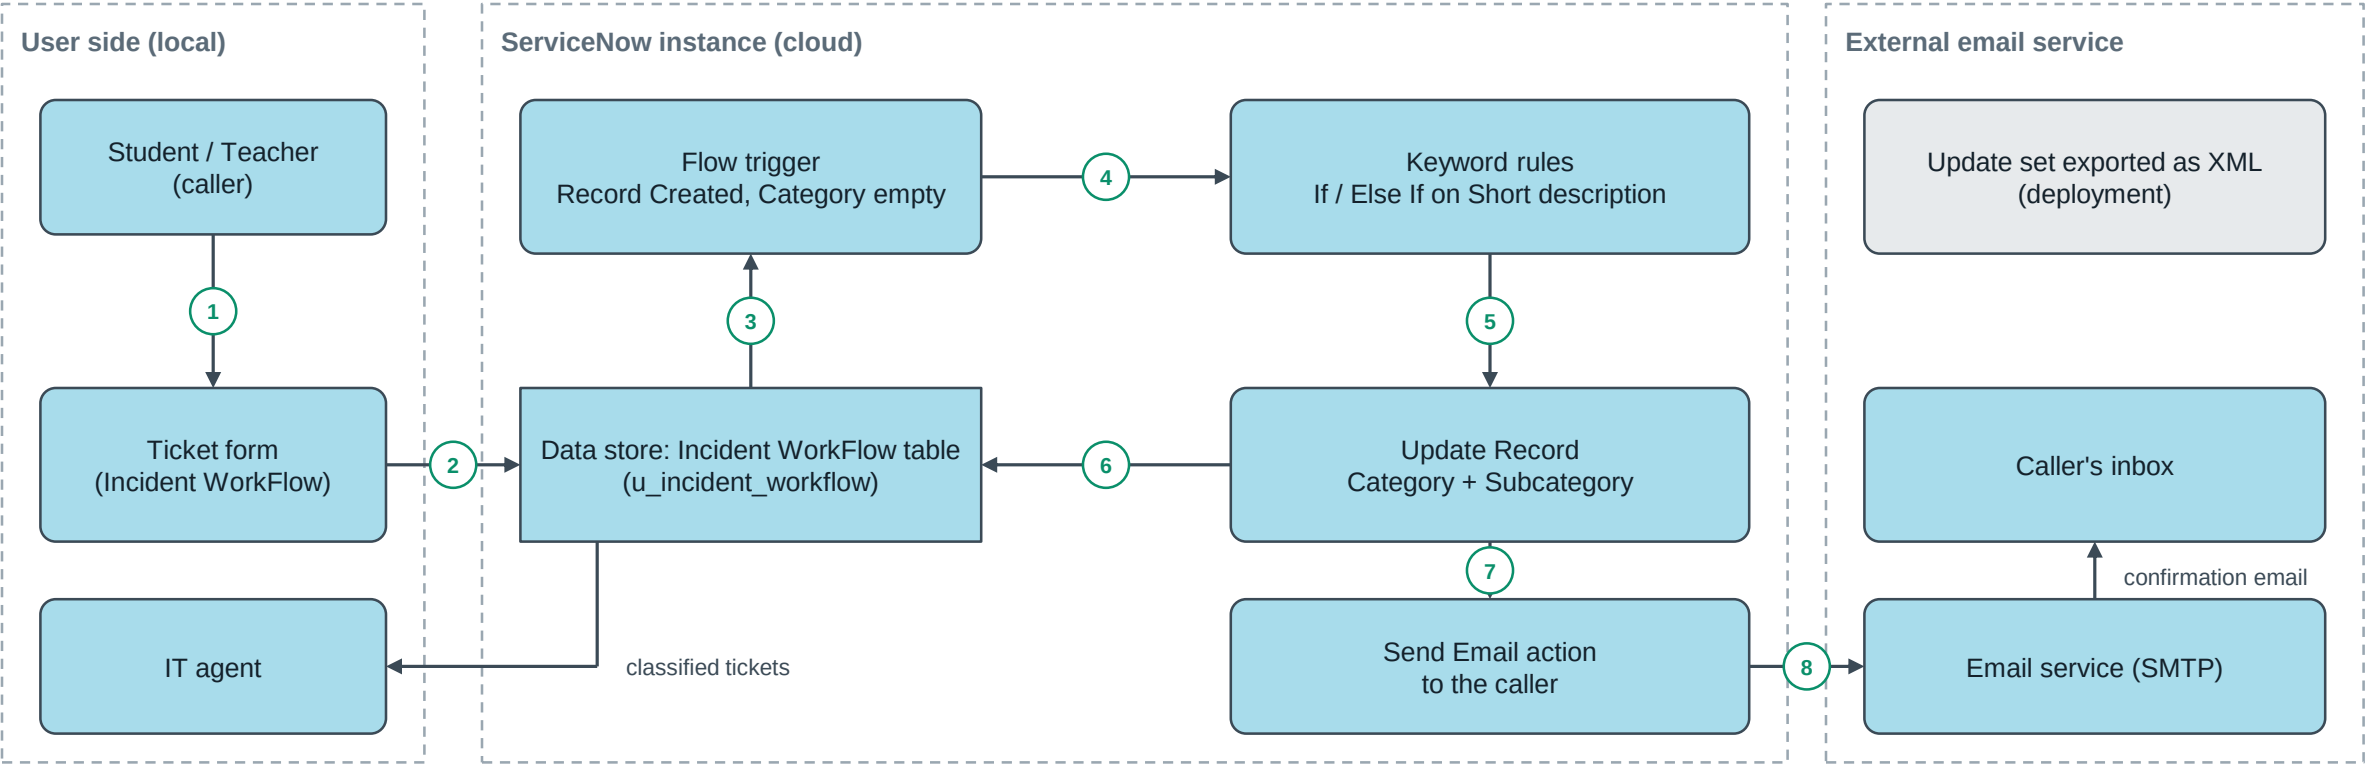

Technology Stack (Architecture & Stack)

Date	
Team ID	SWTID-2026-2451
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The diagram shows how a ticket moves from the caller through the ServiceNow Flow Designer automation to the confirmation email. Details are in Table-1 and Table-2.

Example: Auto classification of school IT tickets (Wi-Fi, projector, password, slow computer)

1 Caller fills form 2 Record saved 3 Trigger fires 4 Keyword check 5 Rule matches 6 Category set 7 Email action 8 Email sent

Project Design Phase-II

Technology Stack (Architecture & Stack)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Caller opens the ticket form and enters Caller and Short description; Subcategory choices depend on Category	ServiceNow web form (Incident WorkFlow), built in Form Designer
2.	Application Logic-1	Trigger: runs when a ticket is created with Category empty	ServiceNow Flow Designer (Record Created)
3.	Application Logic-2	Keyword check on Short description: Wi-Fi/Network, Projector, Password/Login, Slow/Hanging	Flow Designer If / Else If conditions
4.	Application Logic-3	Sets Category and Subcategory on the ticket	Flow Designer Update Record action
5.	Application Logic-4	Sends a confirmation email to the caller	Flow Designer Send Email action
6.	Database	Custom table with Number (INC auto-number), Caller, Category, Subcategory, Short description, Description, State, Assigned group, Assigned to	ServiceNow table u_incident_workflow
7.	Cloud Database	Database service hosted with the ServiceNow instance	ServiceNow platform database (cloud)
8.	File Storage	No file storage needed; the update set is exported as an XML file	Local filesystem (XML download)
9.	External API	Email delivery to the caller	SMTP email service
10.	Machine Learning Model	Not used; classification is rule-based keyword matching	None
11.	Infrastructure (Server / Cloud)	Application deployment. Local server configuration: not required. Cloud server configuration: ServiceNow instance (Global scope)	ServiceNow cloud, deployed with an update set

Project Design Phase-II

Technology Stack (Architecture & Stack)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No open-source frameworks; the solution is built with ServiceNow no-code tools	Flow Designer, Form Designer
2.	Security Implementations	Role-based access: only authorized users can view or change tickets in the custom table	ServiceNow ACLs and user role (u_incident_workflow_user)
3.	Scalable Architecture	Rules sit in one flow, so new keywords and categories are added without code; can extend to auto-assignment and SLA tracking	ServiceNow platform, Flow Designer
4.	Availability	Hosted on the ServiceNow cloud, so it is available whenever the instance is up	ServiceNow cloud instance
5.	Performance	The flow runs automatically at ticket creation using simple keyword checks, so there is no manual triage delay	Flow Designer trigger on Record Created
